Study title Authors Source Study centre	Eucerin® Re-Balance: A New Product Line for Cleansing and Care of Irritable Facial Skin A. Schölermann Kosmet. Medizin 20 (6): 324 - 326 (2000) proDerm, Institute of Applied Dermatological Research, Schenefeld, Germany
Test products Method Participants Diagnosis Application Test area	Eucerin® Re-Balance Soothing Cream (verum) Cream base (placebo; without arginine or fucogel) Eucerin® Re-Balance Cleansing Cream <ul style="list-style-type: none"> ■ In-use test, controlled ■ 39 volunteers, 5 men and 34 women, aged 18 to 65 years ■ Very sensitive skin ■ Twice daily for 2 weeks ■ Verum: face, neck and 1 forearm; Placebo: contralateral forearm Cleansing Cream: face and forearm
Results	<ul style="list-style-type: none"> ■ The skin compatibility of the test products was evaluated as “good” to “very good” by 60% of the volunteers. The Cleansing Cream was evaluated as “good” to “very good” by all the study participants. ■ Efficacy: The skin-soothing effect of the verum was demonstrated by a significant reduction in transepidermal water loss and a reduction in skin redness after SLS irritation versus the placebo.
Conclusion	The Eucerin® Re-Balance cleansing and care system demonstrated good skin compatibility and a significant skin-soothing effect in study participants with very sensitive facial skin after experimental skin irritation.
